

Flashover Training Cape Extends Bunker Coat Wear Life!

- Developed with area Fire Departments to protect bunker coats against premature wear that results from exposure to intense heat, flames and burning debris found in simulated flashover units.
- Training cape helps reduce premature wear by deflecting heat and preventing debris from landing on gear.
- Constructed from Dual Mirrored Aluminized Kevlar® twill material – a recognized outer shell in NFPA 1976 Standard on Protective Ensemble for Proximity Fire Fighting.
- Designed to be worn over a bunker coat with SCBA. Fits wide range of sizes. Front area is designed to allow Fire Fighters to manoeuvre and move with relative freedom.
